Multivitamin	Fill micronutrient gaps	As labeled	Not a substitute for var
Beta-Alanine	Muscular endurance	3-6 g per day	May cause harmless ti
ZMA (Zinc/Magnesium)	Sleep quality, recovery	As labeled	Most useful if actually

General Cautions

More is not always better; exceeding recommended doses does not necessarily improve results and can increase side-effect risk.

Choosing third-party tested products (e.g., NSF Certified for Sport, Informed-Sport) reduces contamination risk.

Whole-food nutrition should be the foundation; supplements fill gaps rather than replace a balanced diet.

Athletes subject to drug testing should verify supplement certification before use.
