

Structured Workout Plans

Choosing a Split

Full Body (2-3x/week): best for beginners and those with limited time; each muscle group trained every session.

Upper/Lower (4x/week): balances volume and recovery; suits intermediate lifters.

Push/Pull/Legs (5-6x/week): higher volume per muscle group, suited to advanced trainees with solid recovery habits.

Bro Split (5x/week, one muscle group/day): allows very high per-session volume but each muscle is trained only once weekly.

Sample: Upper/Lower (4 Days)

Day	Session	Key Lifts
Mon	Upper A	Bench Press, Barbell Row, OHP, Lat Pulldown, Curl, Triceps Pushdown
Tue	Lower A	Back Squat, Romanian Deadlift, Leg Press, Calf Raise, Plank
Wed	Rest	Light cardio or mobility work
Thu	Upper B	Incline DB Press, Pull-Up, Lateral Raise, Face Pull, Hammer Curl
Fri	Lower B	Deadlift, Walking Lunge, Leg Curl, Calf Raise, Hanging Leg Raise

Sample: Push/Pull/Legs (6 Days)

Day	Session	Focus
Mon	Push	Chest, Shoulders, Triceps
Tue	Pull	Back, Biceps, Rear Delts
Wed	Legs	Quads, Hamstrings, Glutes, Calves
Thu	Push	Repeat with volume/intensity variation
Fri	Pull	Repeat with volume/intensity variation
Sat	Legs	Repeat with volume/intensity variation
Sun	Rest	Full recovery

Progressive Overload Principles

Increase difficulty over time via more weight, more reps, more sets, shorter rest, or better technique - not all at once.

A simple linear model: add 2.5-5% load once the top of the rep range is hit with good form on all sets.

Deload every 4-8 weeks (reduce volume/intensity ~40-50% for a week) to manage fatigue and reduce injury risk.
